

3. PROJECT DESIGN

Project Title

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Introduction

The Project Design Phase focuses on designing the structure and workflow of the proposed IT procurement automation system. In this project, the design describes how a standard laptop request moves through the ServiceNow process, from placing the request and obtaining approval to automatically creating a catalog task for laptop configuration. The design also defines the connection between the Service Catalog, Flow Designer, Requested Item, and Hardware assignment group. This phase provides a clear blueprint for implementing the automated workflow.

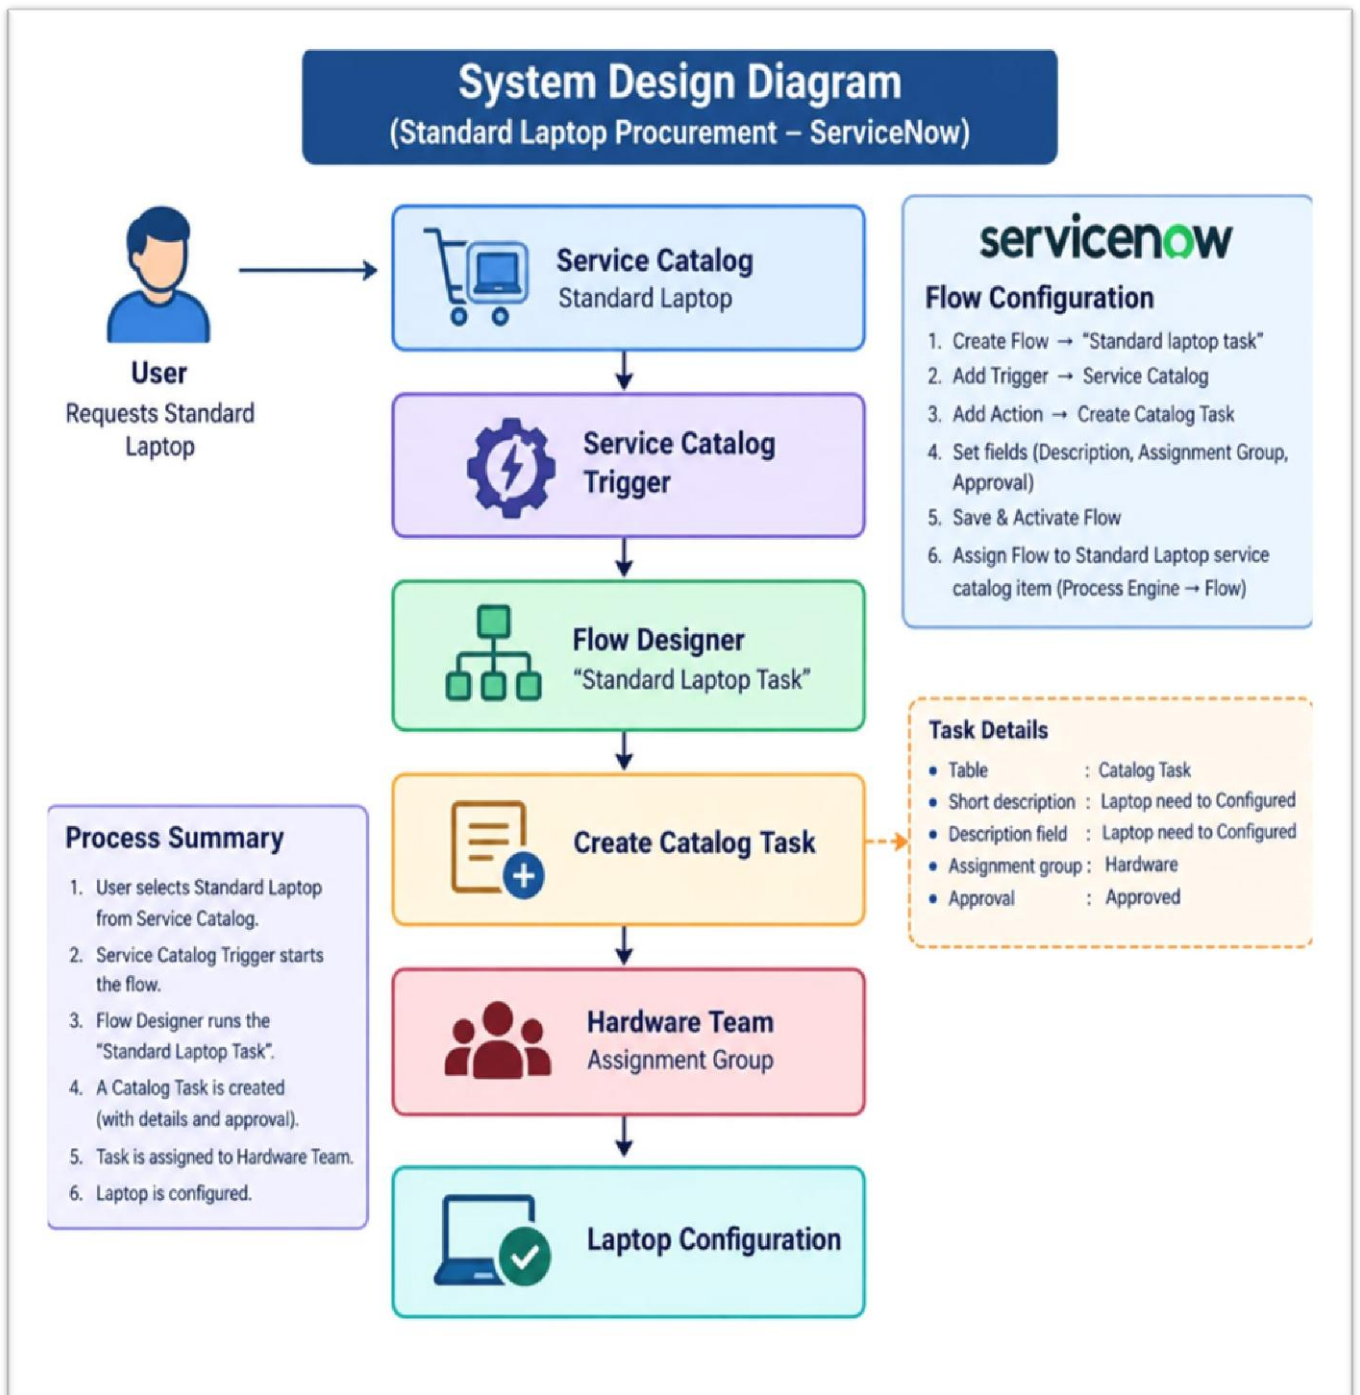

Design Overview

The project design defines how the approved Standard Laptop request will be connected to an automated workflow in ServiceNow. The design uses Flow Designer to create a Catalog Task and assign it to the Hardware group for laptop configuration.

System Design Components

- **Service Catalog:** Provides the Standard Laptop item through which the request is placed.
- **Approval Process:** The requested item is processed for approval before the task is created.
- **Flow Designer:** Automates the workflow after the Service Catalog trigger.
- **Create Catalog Task Action:** Creates the task for laptop configuration.
- **Hardware Assignment Group:** Receives the configuration task.
- **Requested Item Record:** Supplies the request information to the Catalog Task.

Service Catalog Design

The Standard Laptop service catalog item is designed to use the newly created Flow. The existing process automations are removed and the Standard Laptop Task flow is added. This connects the service request directly to the automated configuration task.

Lenovo - Carbon x1

x1 Carbon

The x1 Carbon is Lenovo's lightest ThinkPad yet. It provides a QHD display that fights glare and weighs less than three pounds. Ideal for most computing tasks, and highly mobile.

Technical Specs:

- Intel core i5 processor
- 512GB solid state drive (SSD)
- Backlit keyboard

Optional Software

☐ Adobe Acrobat

☐ Adobe Photoshop

Expected Design Outcome

The designed workflow provides a clear connection between the Standard Laptop service request and the Hardware configuration task. After approval, the flow creates the required Catalog Task with the specified description and assignment group.

Component	Configuration
Service Catalog	Standard Laptop
Trigger	Service Catalog
Flow	Standard laptop task
Action	Create Catalog Task
Assignment	Hardware
Approval	Approved

Source Basis

This phase is prepared from the supplied project document, which specifies the Flow Designer configuration, Catalog Task action, Standard Laptop service catalog assignment, and approval workflow.

Conclusion

The Project Design Phase provides a clear structure for the proposed standard laptop procurement automation. The designed workflow connects the Service Catalog request with Flow Designer so that, after approval, a catalog task can be created with the required laptop configuration details and assigned to the Hardware group. This design forms the foundation for the development and implementation of the project.
