

Coding & Solution

Date	28 September 2026
Team ID	6ab2210011b716a3e52c62c6
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	Not applicable - this is a no-code ServiceNow Flow Designer configuration, not a code repository
Programming Language(s)	No-code (ServiceNow Flow Designer); underlying platform scripts use JavaScript where needed
Framework(s) Used	ServiceNow Flow Designer, Service Catalog
Key Features Implemented	Flow trigger on Standard Laptop request, automatic Catalog Task creation, assignment to Hardware group, approval-based execution
Pending / Incomplete Features	Advanced error handling and SLA-based escalation are not yet implemented
Setup / Run Instructions	1. Log in to the ServiceNow instance. 2. Open Flow Designer and locate "Standard Laptop task" flow. 3. Ensure the flow is Active and linked to the Standard Laptop catalog item. 4. Raise a request from Service Catalog > Hardware > Standard Laptop to test.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes

2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Partial
4	Error handling is implemented for critical operations	Partial
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Not applicable (no-code platform configuration)

Additional Notes / Comments:

This project was built entirely on ServiceNow's no-code Flow Designer platform rather than traditional programming, so items like repository links and programming languages are not applicable in the conventional sense. The flow logic itself is modular, uses clear action and field names, and runs without critical errors during testing.
